

Press release from Profoto AB – The Light Shaping Company

Subject: Profoto Acute/D4 Head

Date: September 2003

Approved for immediate use.

Improved Light Quality: The new Profoto Acute/D4 Head

Profoto flash heads are esteemed for their compact yet stable construction, reliability, ease of use and light quality. Because of the frosted glass covers and unique high and "open" position of the light source, it is possible to zoom the reflector to adjust and change the light characteristics over a wide range.

On top, even when working with direct light, the effects of the model and flash light are similar: "What you see is what you get!"

Now Profoto introduces the new Acute/D4 Head, a flash head with an even improved light quality and optimised functionality:

1. Silent fan technology

The speed of the fan is regulated due to the usage to ensure a comfortable minimized sound level in all situations.

2. Efficient fan cooling

A totally new and more efficient fan cooling design makes overheating problems even less likely.

3. Best quality of light

Due to a new glass cover design and an improved mounting plate used under the flash tube/modeling lamp, the light output is more colour stable, the light distribution more even and the light output is increased.

4. Improved safety function

The new overheat protection system offers highest security even at continuous use.

5. Automatic voltage adjustment

Despite of the of the mains voltage, new electronics guarantee optimal function of the fan worldwide.

6. Reduced weight

Because of the advanced electronics and fan, the weight of the new Acute/D4 Head ´s is 10% lower.

7. Full compatibility

The Acute/D4 Head ´s new fan and electronics provide 100% functionality with Profoto´s D4 and Acute2 generators.

If you wish to know more and for retailer addresses, please contact Profoto, phone +46(0)8-447 53 00 or email info@profoto.se.

Profoto´s complete product range for professional photographers also includes the Pro-7 family, D4, Acute2 and ComPact series. In addition to this flash assortment, Profoto also offers constant light sources (HMI and Tungsten). For all of these, there is a very wide range of Profoto´s light shaping tools and accessories.
